WORK EXPERIENCE

Intern — Excelerate Project Management Associate Early Remote Internship | Jan 2026

- Tracked project timelines, deliverables, and team progress.
- Maintained documentation and status reports.
- Supported operational problem-solving during project execution.

Intern — GAZI Communication | Nov 2025 – Jan 2026

- Conducting requirements analysis for routers, switches, and firewalls within the pre-sales team.
- Gaining hands-on exposure to network layer configuration and deployment processes in the deployment department.

Intern, Management Trainee (Content Writing Department) — YSSE | Aug 2023 – Dec 2023

- Authored 30+ blogs on career development and education, improving content reach and engagement.
-

EDUCATION

B.Sc. in Computer Science & Engineering | *Notre Dame University Bangladesh* | 2025 | **CGPA:** 3.90

HSC, *Military Collegiate School Khulna* | 2020 | GPA: 5.00 (Golden A+)

SSC, *Military Collegiate School Khulna* | 2018 | GPA: 5.00 (Golden A+)

PROJECTS

1. UComp – Competition Management Platform (*Live Demo* | *GitHub Repo*)

Technologies: Next.js, TypeScript, MongoDB, Mongoose, Tailwind CSS, Clerk, bKash

- Built a full-stack competition platform supporting event creation, registration, and payment processing.
- Implemented secure authentication and user management using Clerk.
- Integrated **bKash payment gateway** for real-time transaction handling.
- Designed scalable MongoDB schemas for events, users, and orders.
- Enabled team and individual competition registration with dynamic form handling.
- Developed API routes for payments, user data, and event management. .

2. Book Management System (*GitHub Repo*)

Technologies: React, Node.js, Express.js, MongoDB, Tailwind CSS

- Created a full CRUD application for managing books.
- Built REST API for creating, updating, deleting, and retrieving book data.
- Designed modern UI with card and table views.
- Implemented routing and dynamic pages using React Router.
- Added loading states and error handling for improved UX.

3. PrintForge (3D Model Browsing Platform)

Technologies: Next.js (App Router), TypeScript, Tailwind CSS, next/image, next/link, JSON-based data.

- Built a 3D model discovery platform with dynamic routing, category-based filtering, detailed model pages.
- Developed reusable, data-driven components powered by typed model and category data.
- Implemented responsive model grids, interactive model cards, and seamless route-based navigation.
- Applied core Next.js concepts including dynamic routes, component reusability, and TypeScript-based data modeling.

4. Assembly Endgame

Technologies: React + TypeScript, Vite, CSS, clsx for conditional class names.

- Built a word-guessing game using React and TypeScript with dynamic game state management and on-screen keyboard interactions.
- Implemented win/loss logic, random word generation, letter tracking, and conditional rendering with React Hooks.
- Developed a modular, accessible UI with reusable components, typed props, and confetti-based win animations.
- Applied core React concepts including state management, event handling, derived state, and component composition

5. WhatsApp Messaging API ([GitHub Repo](#))

Technologies: Node.js, Express.js, WebSocket, WhatsApp Web API

- Developed a RESTful API for sending WhatsApp messages programmatically.
- Implemented **QR-based authentication** using WebSockets.
- Added API key authentication and rate limiting for security.
- Built message queue system for efficient message delivery.
- Designed modular backend architecture with controllers, services, and middleware

6. Wild Horizons API ([GitHub Repo](#))

Technologies: Node.js (Vanilla), HTTP Module, JavaScript (ES Modules)

- Built a REST-style API without frameworks using Node.js native HTTP module.
- Manually handled HTTP requests and responses with proper status codes.
- Implemented JSON-based data handling and routing logic from scratch.
- Demonstrated strong understanding of backend fundamentals and API design principles.

7. Travel Journal

Technologies: React (Vite + React 19), JavaScript/JSX, Vanilla CSS, local image assets.

- Built a travel journal that renders **multiple location entries** with a consistent card layout.
- Implemented **reusable components** (Header, Entry) for clean separation of UI structure and content.
- Used **props** to pass each entry's data (image, country, dates, description, Google Maps link) into Entry.

8. Meme Generator

Technologies: React (Vite), JavaScript/JSX, Vanilla CSS, local assets.

- Built an interactive meme generator UI to let users create memes by combining background/overlay text.
- Implemented state-driven rendering so the meme updates instantly as inputs change.
- Demonstrates core React concepts: **component composition, event handling, and controlled inputs/state**.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python (NumPy, Pandas, Scikit-Learn), C, C++, Java, SQL, NoSQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, shadcn/ui

Backend: Node.js, Express.js, REST APIs, Socket.io, HTTP Module

Database: MongoDB, Mongoose, MySQL, SQL Server, Xamp Server

Tools & Platforms: Git, GitHub, Postman, Vercel, Netlify, Clerk, Firebase, Cisco Packet Tracer

Others: WebSockets, API Design, JSON, LocalStorage, Zod, Arduino, ESP32, Agile methodologies

ACHIEVEMENTS & ACTIVITIES

Programming Competitions: Champion, Luna Shamsuddoha Programming Contest 2024; Runners-up, Hardware-Based Project Show 2024; Best Group, Inter-House Math Olympiad 2018.

Speaking Competitions: Anchor, CSE Fest (NDUB); Verbal Mention, IOMUN; Best Speaker, Inter-House Public Speaking (MCSK).
